

The present invention relates to an assembly, comprising a first object and a second object, and means for the defined support of the first object on the second object, the means including three individual protrusions.

#### Discussion of Background

B<sub>1</sub>  
(cancel)  
Assemblies of this type are known in the technical field, the protrusions usually being indicated as legs. The known support assemblies provide a satisfactory hold on a horizontal, smooth base. A direction of the first object relative to the second object is thereby indeterminate.
